POWER SUPPLY MIX

Our Colorado energy mix includes natural gas, coal and hydroelectric power, along with wind and solar power generated by Xcel Energy and through our renewable energy programs: Renewable*Connect, Solar*Rewards and Solar*Rewards Community.

2025 Colorado energy mix

PRICE COMPONENTS

Percentage-based price components apply to an average customer's monthly electric bill and may differ when applied to individual customers.

Power supply costs include all purchased power and energy source costs. For Xcel Energy-owned generation plants, these costs also include plant labor and depreciation, allocated overhead, taxes and a profit component. **Power delivery** costs include labor associated with transmission and distribution facilities, metering, billing, customer service, allocated overhead, taxes and a profit component. For example, if your residential bill is \$98.21, then about 56% (or \$54.76) of your bill is for the electricity itself, and about 44% (or \$43.45) covers the cost of having the electricity delivered to your home. Learn more about where your electricity comes from at xcelenergy.com.
